ECLIPSES FOR 1868.

There will be only two Eclipses this year, both of the Sun, and neither of them visible in North America.

I. An Annular Eclipse of the Sun, February 23. Visible in South America, Africa, and Southern Europe.

II. A Total Eclipse of the Sun, August 18. Visible in Eastern Africa, Southern Asia, and in Australia.

A Transit of Mercury over the Sun's disc, will occur November 5. Invisible in North America.

Morning Stars.	Evening Stars.
Venus (♀) after July 16.	Venus until July 16.
Mars (♂) from Jan'y 2 to Nov. 13.	Mars until Jan. 2, and after Nov. 13.
Jupiter (♃) from March 10 to July 4.	Jupiter until Mar. 10, and aft. July 4.
Saturn (♄) until Feb'y 24 and after Nov. 29.	Saturn from February 24 to November 29.

THE PLANETS.

Mercury (☿) will be at the most favorable stations for visibility, February 17, June 13, and October 9, being then Evening Star, and appearing in the west just after sunset; also April 7, August 5, and November 24, being then Morning Star, and appearing in the east just before sunrise.

Venus (♀) will be in the constellation Capricornus until January 20, then in Aquarius until February 15, being directly south of the Urn January 23. It passes the equinoctial February 15, rising exactly on the east

point of the horizon, and setting squarely in the west. It will be in Pisces from this time to March 12, then in Aries until April 6. On the 4th April it will be 2° south of the brightest star in the Pleiades. April 14 it will be 8° north of Aldebaran, and on the 25th it will be 2° 22′ south of Tauri. It passes the solstitial colure May 4, and will be the farthest north May 6. May 7 it reaches its greatest eastern elongation from the Sun, 45° 31′. On the 26th it will be 7° south of Castor, and on the 30th it will be 4° south of Pollux. June 9 it will be *brightest;* after which it approaches the Sun, and daily loses its splendor. June 23 it becomes stationary, having been moving direct, or eastward, since its last superior conjunction, but now it begins to retrograde, and is situated a little southwest of the nebulæ in Cancer. It passes Pollux again July 18, 12° 28′ to south of it; but this will not be visible, as Venus will be in inferior conjunction with the Sun on the 16th and itself invisible. It now moves off from the Sun westward apparently, and increases in beauty as a *morning* star. On the 7th of August it becomes stationary again, and begins to pass the stars eastward, and reaches its greatest splendor again on the 21st. On the 25th September it reaches its greatest western elongation, 46° 9′. October 6th it will be 1° south of Regulus. November 7th it crosses the Equator southward; November 21st, 4° north of Spica; December 10th, enters Libra's Square, and on the 15th is near the middle of it; December 29th, 6° 12′ north of Antares.

Mars (♂) will come to the meridian during the daylight for the first nine months of the year. It has no opposition this year, and will not be an object of much interest until near the close of the year. November 27 it will be 2° north of Regulus in the handle of the Sickle. It will be near the Sickle during November and December.

Jupiter (♃) has been travelling northward since May 8, 1865, and on the first day of May it crosses the Equator, and rises exactly in the east at 3h. 32m. morn. It will be southeast of the Urn in the first part of the year, but directly east of it May 1. October 1 it will be brightest and in opposition to the Sun, rising at sunset and setting at sunrise. On the 8th of April it will be *very close* to Mars.

Saturn (♄) will be in opposition May 23, and brightest, rising as the Sun sets, and setting as the Sun rises. It will be in the region 10° or 12° north of Antares all of the year.

Occultations.—The Moon will occult or eclipse the bright star *a* Tauri, or Aldebaran, January 7, at 1h. 17m. morn., at Washington, the star reappearing at 2h. 20m. The same star will also be occulted again November 29, at 5h. 54min. eve., at Washington, and reappear at 6h. 51m. evening. These occultations are interesting to witness.

Height of the Atmosphere.—Observations on several bright auroras in 1865, occurring at a very early morning hour, lead to the belief that these phenomena in the upper air were modified by the light of the rising sun tinging them long before it came near the earth's surface. Yet these auroras, as well as the incandescence of aerolites, or shooting-stars, occur, as repeated observations prove, at heights varying from a few miles above us up to 100 or more; and as they are all believed to prove the presence of an

atmosphere where they occur, they appear to prove that too low a limit has been fixed for the earth's atmosphere—which is commonly regarded as terminating at the height of about fifty miles. The mean altitude of the shooting-stars of November 13, 1863, observed at Washington, Philadelphia, etc., was 92 miles. Prof. Newton thinks that none has been observed at a greater height than 125 or 150 miles.

On the 12th of May, 1866, a star of the second magnitude suddenly appeared in the constellation of the Northern Crown, but quickly began to lose its brilliance. Its light being examined by the spectroscope, showed two distinct spectra, one like that of the other stars and of the sun, the other consisting of four bright lines, indicating the combustion of gas, especially hydrogen. The great brightness of the lines showed that the luminous gas was hotter than the star itself. These indications, together with the suddenness of the outburst of light, and its rapid decline from the second magnitude to the eighth in twelve days, suggest the startling conception that the star had suddenly become enwrapped in the flames of burning hydrogen, which also intensified the heat and light of the star itself, till the cause of the combustion was exhausted, and the star relapsed to its former insignificance. All this, though so recently visible to us, must have occurred many years ago.

LIGHT HOUSES.

Commissioners of Eight Houses in the Bay of Fundy,

R. W. Crookshank, Esquire, | Geo. W. Smith, Esquire.

Cape Sable Seal Island Light.—The first Light in approaching the Bay of Fundy, is on the South Point of the Seal Island. This is a plain white Light, elevated about 80 feet above high water mark, and may be seen in approaching the Island from any point of the compass. A very dangerous rock, under water, but upon which the sea always breaks, called *Blonde Rock*, lies about 3½ miles S. by W. by compass, from the Light House. Between this rock and the Island, there are some dangers—the ground is rocky throughout, and large vessels, therefore, ought not to attempt passing between them.

Brier Island Light.—In advancing up the Bay, the next Light is situated on Brier Island, about half a mile N. E. from the N. W. point thereof. A plain white light.

Digby Gut Light.—The next light on the coast of Nova Scotia is placed on the west side of Digby Gut—from Brier Island North Eastward. The coast is very bold and not indented; the Light is therefore chiefly intended as a guide into Digby Basin. A white light.

Gannet Rock Light.—This Light is intended to warn vessels of their approach to a very dangerous range of shoals and ledges, which extend from

the Old Proprietor to the Seal Islands off Machias, a distance of about twenty miles. It is a flash light—*white*—twenty seconds dark and forty light in each minute. The Light House is painted in stripes, vertical, black and white.

Bearings and Distances by Compass from the Gannet Rock Light House.

The Light bears from the Light house on Brier Island, N.N. ¾ W. 22 miles.

From the Gannet Rock to the Old Proprietor E. ½ S. distance 7 miles.

From the Gannet Rock to the Black Rock, off White Head Island, N. E. ½ E. 7 miles.

From the Gannet Rock to the South West Head of Grand Manan, N. N. W. 6½ miles.

From the Gannet Rock to the Northernmost of the Murr Ledges, N.W. ½ N. 2½ miles.

To the Southernmost of ditto, called St. Mary's Ledge, W. S. W. 2 miles.

From the Gannet Rock to Machias Seal Island, W. and by N. ½ N. 13 miles.

NOTE.—Between the Northernmost and Southernmost of the Murr Ledges, there is a range of dangerous rocks and shoals, many of them always above water, and which extends Westward from the Light House about four miles; from this range, farther Westerly, about six miles from the Gannet Light, lies a dangerous breaker called the Bull. This may be avoided by keeping 3 remarkable headlands near the S.W. end of Grand Manan open.

From Brier Island Light to Old Proprietor, N. and by W. ¼ W. 18½ miles.

The Blonde Rock from the Southernmost point of the Cape Sable Seal Island, S. and by W. 2½ miles.

Machias Seal Island Lights.—There are two fixed *white* lights upon the Machias Seal Islands, elevated about forty-five feet above high water, and bear from each other E. S. E. and W. N. W. distant about 200 feet, by which circumstance of two Light Houses at the same station, they will be immediately distinguished from all other lights upon the coast, (British or American) Both the Buildings are painted white. The following are the bearings from them, viz:—

To the Southernmost Murr Ledge, (St. Mary's) E. S. E. easterly.
" Gannet Rock Light, E. by S. ¼ S. 13 miles.
" Southern Head of Grand Manan, E. by N. ½ N.
" Northern Head of Grand Manan, N. E. ½ E.
" N. E. Rock, distant 2 miles, N. E. by N.
" Little River Head, N. by W.
" Libby Island Light House, (American), N. W. by W.

Vessels standing to the Northward, between these Lights and the Gannet Rock, should tack or haul off the moment they bring these Lights in one, as they will not then be more than three fourths of a mile from the Murr Ledges, if more than five miles to the East of the lights.

[It is recommended that the Ship's Compasses should be well compared and adjusted (particularly in new Ships,) before they leave Partridge Isand, as serious errors have frequently occurred from want of attention on this point; and as the variation in the Bay of Fundy is seventeen degrees Westerly, or 1½ points) it will be found by the latest published Admiralty Charts, that the course from Partridge Island down the Bay (South Channel) between the old Proprietor, and N. W. Ledge, is S. W. ½ S., but the course to be steered must depend on the direction of the wind on leaving Partridge Island.]

Head Harbour Light.—Next in order after passing Grand Manan and the plain white Light, (American) on West Quoddy Point, is Head Harbour Light. This is placed on the North East extremity of Campo Bello, and is a guide to vessels entering the main Channel to West Isles, Moose Island, and the inner Bay of Passamaquody; it enables vessels also at all times to enter Head Harbour—it is a fixed *white* light. The building is painted white, with a red cross on it.

Point Le Preaux Lights.—Upon this projecting head land two lights are placed, one above the other, in the same house, and distant 28 feet—Both lights can be seen from every point of the compass, where they may be useful—both are fixed and *white*. The Light House is painted red and white, in stripes of five feet broad horizontally.

Partridge Island Light.—This light at the entrance of the River and Harbour of Saint John, having been established upwards of forty years, requires no particular notice, further than that it is a fixed *white* light, and that the Light House is red and white, in vertical stripes.

A Fog Horn or Steam Whistle (the first of the kind ever used for this purpose) was placed on Partridge Island, near the Light House, in Sept. 1860, and is sounded at intervals of 10 seconds in every minute, during the prevalence of Fogs and Snow Storms. The whistle can be distinctly heard at the distance of four to six miles.

There is also a *Bell Buoy* anchored at extremity of the Ledge at the eastern end of the Island, which is very useful to vessels in thick or rough weather. The sound of the Bell can be heard three miles distant.

Beacon Light.—Within Partridge Island, and upon a Spit or Bar which extends about half a mile S. S. E. off Sand Point, and which dries at two thirds ebb, formerly stood the Beacon; but it was unfortunately destroyed by fire on the 9th January, 1867; the abutment only remains. A new Tower and Light is soon to be erected.

Quaco.—A revolving *white* light is placed on a small rock off Quaco Head, showing twice full and twice dark in a minute. This light can be seen from any quarter where a vessel can approach. The Light House is painted white and red in horizontal stripes.

Cape Enrage Light.—On the point of that name, in Westmorland, nearly opposite Apple River Harbour, N. S. A plain *white* light. The House is painted white, and is about 120 feet above tide mark.

West Quoddy Light.—This is an American Light, and is placed on the West side of the entrance into the Saint Croix by Lubec and Eastport.

Cape Forchu Light.—On Cape Forchu, on the western side of the entrance to Yarmouth (Nova Scotia,) in lat. 43, 39, N. long. 66, S. W. It exhibits a plain revolving light—visible one minute and a quarter, and invisible half a minute. The building is painted white and is elevated 135 feet above the level of the sea.

Grindstone Island Light.—An Octagonal Tower, sixty feet above the level of high water on Grindstone Island in Chignecto Bay, in lat. 45° 43′ 13″ N. long. 64° 37′ 25″ W. The Tower is painted white, as is also

the Keeper's house, one story, situate about 50 feet to the Eastward of the Tower.

Bearings and distances of several places from the above Light House, as follows;

Cape Enrage Light by compass, S. 61½ W. 10 1-7 miles.

Highest point of St. Mary's Ledge by compass, N. 40 W., 6-10 miles.

The point of low water off the Light, by compass, S. 78 W., 2-10 mile.

Jones' Ledge, N. 10 W., 3-10 mile, it dries at low springs and has about 2½ fathoms on it at half tide.

The Sand Bank, S. 15 W., 3-10 mile, it has 1¾ fathoms on its shoalest part at low water springs.

Grand Manaan.—There is a Light House and Keeper's House at the "Swallow Tail" on the North Eastern part of the Island of Grand Manan, in the Bay of Fundy. The Light is 45 feet from Base to Deck; the point on which it stands is 103 feet above high water, making 148 feet elevation. This is a conspicuous mark in the South Channel between Brier Island and Grand Manan. Both Houses are painted white.

Richibucto Head Light.—This is a fixed White Light, situated on Richibucto Head, Northumberland Strait, in the Gulf of Saint Lawrence. The light is placed at an elevation of 70 feet above high water, and should be seen in clear weather from a distance of 14 miles. The illuminating apparatus is dioptric or by lenses of the fourth order. The tower is square, about 50 feet high from base to vane, painted white, and stands in lat. 46° 39′ 40″ N., long. 64° 43′ 30″ W. of Greenwich.

1st Month. **JANUARY.** 31 Days.

JANUARY, the first month in our present calendar, was also the first month in the Roman calendar. It was not the first month of the year in Britain till 1752, when the legislature, by an act passed in the preceding year, altered the mode of reckoning time from the Julian to the Gregorian style. At this time it was directed that the legal year, which then commenced in some parts of the country in March, and in others in January, should universally be deemed to begin on the first of January.—January derives its name from Janus. Macrobius expressly says it was dedicated to him because, from its situation, it might be considered to be retrospective to the past, and prospective to the opening year. It consists of thirty-one days, though originally only of thirty days. The Anglo-Saxons called January *Wolf-monath.*

FEBRUARY, the second month of the year. Its name is derived from *februro*, to purify or cleanse. The Saxons called it *Sol-monath*, because the sun's meridian altitude visibly increases in it.

February was not in the calendar of Romulus. It was added to the year by Numa, who gave it the twelfth place in the calendar. The Decemviri transferred it to the place where it now stands. Numa assigned twenty-eight days to it, in order that the sum of the year might be an uneven number, according to a Pythagorean fancy. In an ordinary year, February has twenty-eight days; in Bissextile, or Leap Year, it has a twenty-ninth day.

MARCH, the third month of the year, according to modern computation, contains thirty-one days. The Roman year originally began with March, and was in fact so considered in England before the alteration of the style, the legal year commencing on the 25th of March. Our Anglo-Saxon ancestors called it most commonly *Hlyd-monath*, loud or stormy month; and sometimes *Hræd* or *Rhæd-monath*, which some interpret *Rhedas*, others *Rhede* or *Rethe*, the rugged or rough month. The name of the month is said to be derived from that of Mars, the God of war.

Ray, in his Collection, has this proverb, relating to this month:—"A bushel of March dust is worth a king's ransom," thereby expressing the importance of dry or dusty weather at this particular season of the year, in an agricultural point of view.

APRIL, the fourth month of the year, consists of thirty days, which was the number said to be assigned to it by Romulus. Numa Pompilius deprived it of one day, which Julius Cæsar restored, and which it has ever since retained. In the original Alban or Latin calendar, April held the first station, and then consisted of thirty-six days. Its name is usually considered to have been derived from *aperire*, to open; either from the opening of the buds, or of the bosom of the earth in producing vegetation. The Anglo-Saxons called it *Ooster* or *Easter-monath*. In this month the sun travels through parts of the signs of Aries and Taurus, that is to say, of those parts of the *ecliptic* which astronomers designate by those names. The real motion of the sun among the constellations is through Pisces and Aries.

MAY, the fifth month of our present year, was the second in the old Alban calendar, the third in that of Romulus, and the fifth in the calendar of Numa Pompilius. In the Alban calendar it consisted of twenty-two days: of thirty-one in the calendar of Romulus: and of thirty in that of Numa. Julius Cæsar restored to it the odd day of which Numa had deprived it, and of which it still keeps possession. Its etymology is doubtful. Ovid proposes three derivations: one from *majestas;* another from *majores*, a term which signified the *patres*, or governing body of the city of Romulus; and the third from *Maia*. The Roman month was under the protection of Apollo.

Our Saxon ancestors, after the Romans, called it *Maius-monath;* and in their native language, *Tri-milchi*, three-milk month, when cows were milked three times a day.

JUNE, the sixth month of the year, named from the Latin Junius. Ovid makes Juno assert that the name was expressly given in honor of herself. Those who derive the name from Junius Brutus, who began his consulship in this month, forget that, according to tradition, it had received the appelation long before.—In the old Latin or Alban calendar, Juno was the fourth month and consisted of twenty six days. Romulus is said to have assigned to it a complement of thirty days. Numa, who named it the sixth month, deprived it of one day, which was restored by Julius Cæsar, since which time it has remained undisturbed.

The Anglo-Saxons had several names for the month of June. They called it *sear-monath*, dry month; *midsumer-monath*. midsummer month; and *æra-litha-monath*, the earlier mild month, in contradistinction to July.

JULY, now the seventh, was originally the fifth month of the year, and was called by the Romans, in regard to its numerical station, *Quintilis*.—Mark Antony altered the name to Julius, the gentile name of Caius Cæsar, the Dictator, who was born in it.—In the old Latin calendar, Quintilis had a complement of thirty-six days. Romulus reduced them to thirty-one; Numa to thirty; but Julius Cæsar restored the day of which Numa had deprived it, which it has ever since retained.—Our Anglo-Saxon ancestors called July *Mæd-monath*, mead-month, from the meads being then in their bloom; and *æftera-litha-monath*, the latter mild month, in contradistinction to June, which they considered and named as the "former mild month."

On the 3rd of this month the Dog-days are supposed to begin.

The month of AUGUST was originally called Sextilis, being the sixth month in the Alban or Latin calendar; and this name, as is stated, it retained in the calendars of Romulus, Numa Pompilias, and Julius Cæsar. Since Numa's reform, however, it has held only the 8th place in the series of months. In the Alban calendar, Sextilis consisted of only 28 days; in that of Romulus, of 30; Numa reduced the number to 29: Julius Cæsar restored it to 30; and Augustus Cæsar from whom it derived its new name of August, extended the number of days to 31, which has continued ever since.

Our Saxon ancestors named August the "weed month," as abounding in noxions and useless herbs.—Lammas day, the first of the month, is also called the Gule of August, probably from the Gothic *Hiol* or *Iul*, a wheel indicating that revolution of season which brought the return of harvest.

SEPTEMBER, the ninth month, as the year is now divided by European nations. It consists of thirty days. Etymologically, the name is improper, being a Latin term formed of *septem*, seven, and the termination *ber*; and the same impropriety belongs to October, November, and December. The Roman year originally commenced in March The legal year in England was not made to commence on the 1st of January till the alteration of the style in 1752. The Saxons called it *Gerste-monath*, or barley-month, *gerste* being the original Saxon name for barley, which was the chief grain cultivated by the Saxons, and commonly harvested in this month. *Gerste* is still the German name for barley, which name seemed to be a corruption of *beer-leagh*, a term which the Saxons applied to the grain from its use in making beer.

OCTOBER, in the year of Romulus, was strictly what its name implies, the eighth month. With us it is the tenth. Domitian, who was born in this month, gave it his own name; but it lasted during his life only.—Antonius Pius, in honor of his wife Faustini, called it Faustinus; and the flatterers of Commodus assigned to it one of their patron's epithets, "Invictus."

Our Anglo-Saxon ancestors called it *se' teotha monath*, the tenth month: they also gave it the name of *Winter-fyllith*, winter-beginning.

NOVEMBER, the 11th month of the Julian year, was the ninth in the year of Romulus, whence it received its name. This name was assigned to it in the Alban calendar. It originally consisted of thirty days, which were continued by Romulus and Numa. Julius Cæsar gave it another day, but Augustus reduced it again to thirty, and this number it has ever since retained.

Our Saxon ancestors called November *Blot-monath*, blood month, the month of sacrifice, because at this season the heathen Saxons made a provision for winter, and offered in sacrifice many of the animals which were then killed.

Martlemas or Martinmass beef, cured about the festival of Saint Martin, the 11th of this month, was a provision formerly well known, and in some places still known.

DECEMBER.—This month still retains the original name assigned to it in the Alban, and first Roman calendar adopted, according to tradition, by Romulus, in both of which it was the tenth as the name signifies, or last of the year. Our Saxon ancestors called it *mid-winter* month and *yule-month*, from 'a wheel,' emblematical of the sun's revolution or return in his annual course.

December was anciently consecrated to Saturn. In the Albian calendar this month consisted of thirty-five days. Romulus reduced it to thirty; and Numa to twenty-nine days. Julius Cæsar restored the day of which Numa had deprived it; and Augustus added another day, which it still retains.

SAFE AND SURE.

Graham's Pain Eradicator

Has stood the test of several years, having been placed before the public in 1869, and its extraordinary curative powers had been long tested previously. It is averywhere acknowledged to be the best and most successful remedy for

Rheumatism, Neuralgia, Asthma,

AND OTHER CHRONIC COMPLAINTS,

Which it cures effectually, and it is equally efficacious for the cure of

Cuts, Burns, Scalds, Bruises, Sprains,

And most forms of Aches and Pains.

DIPTHERIA, QUINSY,

And other forms of **Sore Throat** are readily cured by it.

As it does not smart or cause any unpleasant sensation children use it readily. It is also the safest and best remedy for **Croup**, and it is excellent for **Coughs** and **Colds**. A few drops will cure **Ear Ache** and the buzzing sound or noise in the head that renders people partially deaf.

NEURALGIA AND HEADACHE

ARE READILY CURED BY IT.

For Lame Back, Lumbago, Sciatica, & Pains in the Side and Breast, it has no equal.

RHEUMATISM,

no matter how long standing, may be cured by following the directions accompanying each bottle. Hundreds have been cured by it, many of whom have been afflicted for from twenty to thirty years, and in many cases the cures have been effected by the use of one or two bottles.

☞ It is the cheapest as well as the best; five drops will cover a surface as large as the hand, and it does not waste by evaporation as do those composed of Alcohol, Ether, Ammonia, &c.

The *Pain Eradicator* does not contain any Opium, Ether, Chloroform, or other dangerous narcotic or mineral substance to destroy the sensibility of the nerves, and only render the sufferer insensible to pain, neither does it contain any Cayenne Pepper, Potash, or Ammonia, to burn or blister; but it is a purely *Vegetable, Soothing, Healing, Balsamic Magnetic Oil,* that acts on chemical and electrical principles; it quickly permeates the tissues, acts directly on the absorbents, equalizes the circulation, reduces inflammation, grandular, and other swellings, and gives freedom from pain by allaying nervous irritation, removing the disease, and restoring a healthy action to the system.

Prepared by T. GRAHAM & SON,

Removed from St. John, N. B., to

PRESCOTT, ONT., AND OGDENSBURG, N. Y.
